

# EXCESS FARM POLLUTION LIABILITY

Today most farm insurance policies provide little if any coverage for chemical spills that happen on the farm premises. MOST companies EXCLUDE any and all coverage for chemical spills that happen off premises. An abrupt, unexpected, and unintended spill creates pollution hazard liability that can far exceed the minimal coverage offered by most farmowners insurance policies. Pollution hazard liability insurance is an area in which most farmers are woefully underinsured or uninsured. The greater use of farm chemicals, the complexity of environmental regulations, and the fact that hazardous material cleanup teams charge up to \$1,000 per hour, can leave farmers

dangerously exposed in the event of an accident. A fish kill or pollution of a water supply caused by an abrupt manure spill or a valve rupture that causes an anhydrous ammonia spill can spell financial ruin!

With premiums starting as low as \$200.00, Performance Insurance Services can help protect farmers, families, and farming operations from abrupt, unexpected, and unintended pollution spills. For less than 50¢ a day farmers can purchase up to ONE MILLION dollars of coverage to protect themselves, their family, and their FUTURE!

## Coverage Highlights:

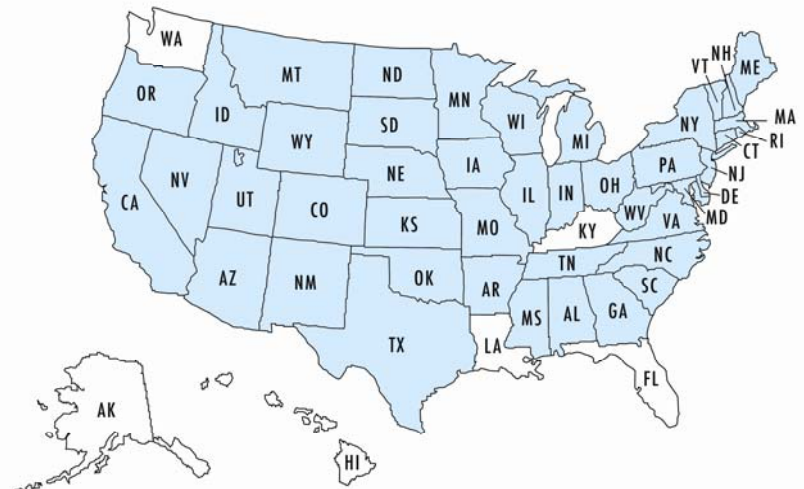

Policy provides up to \$1,000,000 excess coverage over your present farm policy.
